

MEC Summary [40 CFR §264.552(D)(1)]

Maps showing where MEC items and munitions debris (MD) have been encountered to date are included in Figure 11 (facility wide) and Figure 12 (OB/OD Area) of the Fort Wingate Depot Activity Community Relations Plan. This plan was submitted to NMED on August 29, 2006.

A table listing specific types (where possible, based on available documentation), locations, and depths where MEC items and/or MD have been encountered is included in Table 5. As noted in the table, with the exception of a few MD locations mapped during recent site walkovers, all of the MEC items encountered to date were either detonated in place or removed from the investigated areas and stockpiled until either being treated in existing detonation craters in the OB/OD Unit or certified as scrap. The table also includes MD that has been recovered, certified, and sent off-site for disposal/recycling.

The map and table are updated annually (by March 31st of each year) and contain the most current summary of MEC at FWDA.
