Aberdeen Proving Ground, Maryland 21010

Dear Dr. Hoddinott:

I am providing requested comments on the draft USACHPPM document Human Health Risk Assessment No. 37-97-0AH4-08, Wipe Sampling Risk Evaluation for BRAC Igloos, Fort Wingate, NM. Thank you for the opportunity to review and provide comment on this draft. I offer these comments in an advisory capacity, with the intent of providing constructive input that will improve the risk evaluation and ensure it is representative of potential exposures to future users of the igloo structures.

Overall the risk evaluation document is very well organized, and presents the assumptions used and the inherent limitations and uncertainties in a transparent fashion. It was a complex undertaking and reflects considerable effort, research and experience in conducting human health risk evaluations. I've kept my comments brief, focusing on the issues that I believe most significant.

Again, thank you for the opportunity to comment. If I can answer any questions or be of assistance please contact me by phone at (770) 488-1342 or email ssudweeks@cdc.gov.

Sincerely,

Scott Sudweeks
