										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Endocrine	0.11
All Others	0.27

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

Nitrate	14797-55-8	mg/kg	4.8	J			NS	NS	2,080,000	N	NMED		2.31E-06
Perchlorate	14797-73-0	mg/kg	0.0043	U			NS	NS	908	N	NMED		
										Cumulative Risk/Hazard		**6E-07**	**0.05**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

IEUBK = Integrated Exposure Uptake Biokentic Model

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

Endocrine	0.11
All Others	0.27

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Cumulative Risk/Hazard		**3E-07**	**0.9**
										Exceeds Target Level		**N**	**N**

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Nitrate	14797-55-8	mg/kg	7.2	J			NS	NS	125,000	N	NMED		5.76E-05
Perchlorate	14797-73-0	mg/kg	0.0046	U			NS	NS	54.8	N	NMED		
										Cumulative Risk/Hazard		**3E-06**	**0.9**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

IEUBK = Integrated Exposure Uptake Biokentic Model

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

All Others	1.65

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

IEUBK = Integrated Exposure Uptake Biokentic Model

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

OTHER PARAMETERS (mg/kg)														
Cyanide	57-12-5	mg/kg	0.37	U			NS	NS	12	N	NMED			
Nitrate	14797-55-8	mg/kg	13				NS	NS	566,000	N	NMED		2.30E-05	
Perchlorate	14797-73-0	mg/kg	0.0049	U			NS	NS	248	N	NMED			
										Cumulative Risk/Hazard		**5E-11**	**1.7**	
										Exceeds Target Level		**N**	**Y**	

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

System	Hazard Quotient
Nervous	1.3
Endocrine	0.10
GI	0.10
Blood	0.10
All Others	0.22

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Perchlorate	14797-73-0	mg/kg	0.0042	U			NS	NS	908	N	NMED		
										Cumulative Risk/Hazard		**6E-07**	**0.05**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

IEUBK = Integrated Exposure Uptake Biokentic Model

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

System	Hazard Quotient
Nervous	1.3
Endocrine	0.11
All Others	0.27

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram

Nitrate	14797-55-8	mg/kg	3.2	J			NS	NS	125,000	N	NMED		2.56E-05
Perchlorate	14797-73-0	mg/kg	0.0041	U			NS	NS	54.8	N	NMED		
										Cumulative Risk/Hazard		**3E-06**	**0.9**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Endocrine	0.10
All Others	0.26

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

5) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

System	Hazard Quotient
Nervous	1.5
Endocrine	0.11
All Others	0.33

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Cumulative Risk/Hazard		**4E-07**	**0.05**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

IEUBK = Integrated Exposure Uptake Biokentic Model

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

										Cumulative Risk/Hazard		**7E-07**	**0.06**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

										Cumulative Risk/Hazard		**4E-06**	**1.0**	
										Exceeds Target Level		**N**	**Y**	

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

System	Hazard Quotient
Nervous	1.6
Endocrine	0.13
GI	0.11
Blood	0.11
All Others	0.25

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Cumulative Risk/Hazard		**6E-07**	**0.06**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

System	Hazard Quotient
Nervous	1.8
Endocrine	0.11
All Others	0.32

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
TEF = Toxicity Equivalency Factor
TEQ = Toxicity Equivalency Quotient
U = Nondetect
UJ = Estimated Nondetect
UTL = Upper tolerance limit

Perchlorate	14797-73-0	mg/kg	0.0042	U			NS	NS	908	N	NMED		
										Cumulative Risk/Hazard		**7E-07**	**0.07**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
TEF = Toxicity Equivalency Factor
TEQ = Toxicity Equivalency Quotient
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

TEF = Toxicity Equivalency Factor

TEQ = Toxicity Equivalency Quotient

U = Nondetect

UJ = Estimated Nondetect

										Cumulative Risk/Hazard		**3E-06**	**1.0**	
										Exceeds Target Level		**N**	**Y**	

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

System	Hazard Quotient
Nervous	0.26
Endocrine	0.19
GI	0.19
All Others	0.36

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
TEF = Toxicity Equivalency Factor
TEQ = Toxicity Equivalency Quotient
U = Nondetect
UJ = Estimated Nondetect
UTL = upper tolerance limit

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

IEUBK = Integrated Exposure Uptake Biokentic Model

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

TEF = Toxicity Equivalency Factor

TEQ = Toxicity Equivalency Quotient

U = Nondetect

UJ = Estimated Nondetect

UTL = upper tolerance limit

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

TEF = Toxicity Equivalency Factor

TEQ = Toxicity Equivalency Quotient

U = Nondetect

UJ = Estimated Nondetect

UTL = upper tolerance limit

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Cyanide	57-12-5	mg/kg	0.32	UJ			NS	NS	12	N	NMED			
Nitrate	14797-55-8	mg/kg	5.9	J			NS	NS	566,000	N	NMED		1.04E-05	
Perchlorate	14797-73-0	mg/kg	0.0041	UJ			NS	NS	248	N	NMED			
										Cumulative Risk/Hazard		**3E-07**	**2.2**	
										Exceeds Target Level		**N**	Y	

System	Hazard Quotient
Nervous	1.8
Endocrine	0.11
All Others	0.30

Notes:

[a] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**Y**	

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

System	Hazard Quotient

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

Cyanide	57-12-5	mg/kg	0.33	U			NS	NS	63	N	NMED		
Nitrate	14797-55-8	mg/kg	7.1	J			NS	NS	2,080,000	N	NMED		3.41E-06
Perchlorate	14797-73-0	mg/kg	0.0021	U			NS	NS	908	N	NMED		
										Cumulative Risk/Hazard		**7E-07**	**0.10**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

Perchlorate	14797-73-0	mg/kg	0.001	J			NS	NS	54.8	N	NMED		1.82E-05	
										Cumulative Risk/Hazard		**7E-09**	**1.2**	
										Exceeds Target Level		**N**	**Y**	

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) Except for arsenic and antimony, background values are the 95% UTLs from the 2009 Background document. For antimony, the background value is the 95% UTL for soil unit 350ss based on the 2012 background study. The arsenic value was determined by December 18, 2013 NMED letter. If arsenic value of 5.6 mg/kg is exceeded then consider the site range compared to 0.2 - 11.2 mg/kg.

2) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
RSL = Regional Screening Level
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
RSL = Regional Screening Level
U = Nondetect
UJ = Estimated Nondetect

Perchlorate	14797-73-0	mg/kg	0.0021	U			NS	NS	248	N	NMED			
										Cumulative Risk/Hazard		**4E-07**	**2.7**	
										Exceeds Target Level		**N**	**Y**	

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
RSL = Regional Screening Level
U = Nondetect
UJ = Estimated Nondetect

System	Hazard Quotient

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
RSL = Regional Screeing Level
U = Nondetect
UJ = Estimated Nondetect

Cyanide	57-12-5	mg/kg	0.32	U			NS	NS	63	N	NMED		
Nitrate	14797-55-8	mg/kg	3.3	J			NS	NS	2,080,000	N	NMED		1.59E-06
Perchlorate	14797-73-0	mg/kg	0.0021	U			NS	NS	908	N	NMED		
										Cumulative Risk/Hazard		**9E-07**	**0.07**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
RSL = Regional Screening Level
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

										Cumulative Risk/Hazard		**5E-08**	**1.4**	
										Exceeds Target Level		**N**	**Y**	

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

System	Hazard Quotient
Nervous	0.49
Endocrine	0.28
GI	0.35
All Others	0.32

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
RSL = Regional Screening Level
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) Except for arsenic and antimony, background values are the 95% UTLs from the 2009 Background document. For antimony, the background value is the 95% UTL for soil unit 350ss based on the 2012 background study. The arsenic value was determined by December 18, 2013 NMED letter. If arsenic value of 5.6 mg/kg is exceeded then consider the site range compared to 0.2 - 11.2 mg/kg.

2) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update)

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
RSL = Regional Screening Level
U = Nondetect
UJ = Estimated Nondetect

All Others	0.26

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

										Cumulative Risk/Hazard		**3E-06**	**0.9**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
RSL = Regional Screening Level
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
RSL = Regional Screening Level
U = Nondetect
UJ = Estimated Nondetect

Nitrate	14797-55-8	mg/kg	13				NS	NS	566,000	N	NMED		2.30E-05	
Perchlorate	14797-73-0	mg/kg	0.0021	U			NS	NS	248	N	NMED			
										Cumulative Risk/Hazard		**6E-07**	**2.6**	
										Exceeds Target Level		**N**	**Y**	

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

System	Hazard Quotient
Nervous	2.0
Kidneys	0.13
GI	0.17
Blood	0.17
All Others	0.23

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
RSL = Regional Screening Level
U = Nondetect

										Cumulative Risk/Hazard		**6E-06**	**1.4**	
										Exceeds Target Level		**N**	**Y**	

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

2) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

System	Hazard Quotient
Nervous	1.5
Endocrine	0.14
GI	0.24
Blood	0.24
All Others	0.34

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

IEUBK = Integrated Exposure Uptake Biokentic Model

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

Cyanide	57-12-5	mg/kg	0.34	U			NS	NS	11.2	N	NMED			
Nitrate	14797-55-8	mg/kg	58				NS	NS	125,000	N	NMED		4.64E-04	
Perchlorate	14797-73-0	mg/kg	0.021	U			NS	NS	54.8	N	NMED			
										Cumulative Risk/Hazard		**3E-08**	**1.1**	
										Exceeds Target Level		**N**	**Y**	

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

System	Hazard Quotient
Nervous	0.22

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Cumulative Risk/Hazard		**6E-07**	**0.06**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

IEUBK = Integrated Exposure Uptake Biokentic Model

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

U = Nondetect

UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**Y**	

System	Hazard Quotient
Nervous	1.4
Endocrine	0.12
GI	0.10
Blood	0.10
All Others	0.26

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Cumulative Risk/Hazard		**6E-07**	**0.07**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

										Cumulative Risk/Hazard		**6E-07**	**0.06**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Heart	0.12
All Others	0.25

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated

										Cumulative Risk/Hazard		**3E-06**	**1.2**	
										Exceeds Target Level		**N**	**Y**	

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

System	Hazard Quotient

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Blood	0.12
Kidneys	0.12
All Others	0.19

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

All Others	0.39

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Cumulative Risk/Hazard		**7E-07**	**0.09**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Endocrine	0.17
Kidneys	0.19
All Others	0.36

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

										Cumulative Risk/Hazard		**8E-07**	**0.08**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
IEUBK = Integrated Exposure Uptake Biokentic Model
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Ecological Risk Assessment Scoping Assessment

ATTACHMENT A
SCREENING-LEVEL ECOLOGICAL RISK ASSESSMENT
SCOPING ASSESSMENT
SITE ASSESSMENT CHECKLIST

INTRODUCTION

This checklist has been developed as a tool for gathering information about the facility property and surrounding areas, as part of the scoping assessment. Specifically, the checklist assists in the compilation of information on the physical and biological aspects of the site including the site environmental setting, usage of the site, releases at the site, contaminant fate and transport mechanisms, and the area's habitats, receptors, and exposure pathways. The completed checklist can then be used to construct the preliminary conceptual site exposure model (PCSEM) for the site. In addition, the checklist and PCSEM will serve as the basis for the scoping assessment. Section III of this document provides further information on using the completed checklist to develop the PCSEM.

In general, the checklist is designed for applicability to all sites; however, there may be unusual circumstances which require professional judgment to determine the need for further ecological evaluation (*e.g.*, cave-dwelling receptors). In addition, some of the questions in the checklist may not be relevant to all sites. Some facilities may have large amounts of data available regarding contaminant concentrations and hydrogeologic conditions at the site, while other may have only limited data. In either case, the questions on the checklist should be addressed as completely as possible with the information available.

Habitats and receptors, which may be present at the site, can be identified by direct or indirect[1] observations and by contacting local and regional natural resource agencies. Habitat types may be determined by reviewing LULC, which are available via the Internet at http://www.nationalatlas.gov/mapit.html. With regard to receptors, it should be noted that receptors are often present at a site even when they are not observed. Therefore, for the purposes of this checklist, it should be assumed that receptors are present if viable habitat is present. The presence of receptors should be confirmed by contacting one or several of the organizations listed below.

Sources of general information available for the identification of ecological receptors and habitats include:

- U.S. Fish and Wildlife Service (http://www.fws.gov)
- Biota Information System of New Mexico (BISON-M) maintained by the New Mexico Department of Game and Fish (NMGF) (http://151.199.74.229/states/nm.htm)
- U.S. Forest Service (USFS) (http://www.fs.fed.us/)
- New Mexico Forestry Division (NMFD) of the Energy, Minerals and Natural Resources Department (http://www.emnrd.state.nm.us/forestry/index.htm)
- U.S. Bureau of Land Management (USBLM) (http://www.blm.gov/nhp/index.htm) or (http://www.nm.blm.gov/www/new_home_2.html)
- United States Geological Service (USGS) (http://www.usgs.gov)

1 Examples of indirect observations that indicate the presence of receptors include: tracks, feathers, burrows, scat

- National Wetland Inventory Maps (http://wetlands.fws.gov)
- National Audubon Society (http://www.audobon.com)
- National Biological Information Infrastructure (http://biology.usgs.gov)
- Sierra Club (http://www.sierraclub.org)
- National Geographic Society (http://www.nationalgeographic.com)
- New Mexico Natural Heritage Program (http://nmnhp.unm.edu/)
- State and National Parks System
- Local universities
- Tribal organizations

INSTRUCTIONS FOR COMPLETING THE CHECKLIST

The checklist consists of four sections: Site Location, Site Characterization, Habitat Evaluation, and Exposure Pathway Evaluation. Answers to the checklist should reflect existing conditions and should not consider future remedial actions at the site. Completion of the checklist should provide sufficient information for the preparation of a PCSEM and scoping report and allow for the identification of any data gaps.

Section I - Site Location, provides general site information, which identifies the facility being evaluated, and gives specific location information. Site maps and diagrams, which should be attached to the completed checklist, are an important part of this section. The following elements should be clearly illustrated: 1) the location and boundaries of the site relative to the surrounding area, 2) any buildings, structures or important features of the facility or site, and 3) all ecological areas or habitats identified during completion of the checklist. It is possible that several maps will be needed to illustrate the required elements clearly and adequately. Although topographical information should be illustrated on at least one map, it is not required for every map. Simplified diagrams (preferably to scale) of the site and surrounding areas will usually suffice.

Section II - Site Characterization, is intended to provide additional temporal and contextual information about the site, which may have an impact on determining whether a certain area should be characterized as ecologically viable habitat or contains receptors. Answers to the questions in Section II will help the reviewer develop a broader and more complete evaluation of the ecological aspects of a site.

Section III - Habitat Evaluation, provides information regarding the physical and biological characteristics of the different habitat types present at or in the locality of the site. Aquatic features such as lakes, ponds, streams, arroyos and ephemeral waters can be identified by reviewing aerial photographs, LULC and topographic maps and during site reconnaissance visits. In New Mexico, there are several well-defined terrestrial communities, which occur naturally. Typical communities include wetlands, forest (e.g., mixed conifer, ponderosa pine and pinyon juniper), scrub/shrub, grassland, and desert. Specific types of vegetation characterize each of these communities and can be used to identify them. Field guides are often useful for identifying vegetation types. A number of sites may be in areas that have been disturbed by human activities and may no longer match any of the naturally occurring communities typical of the southwest. Particularly at heavily used areas at facilities, the two most common of these areas are usually

described as "weed fields" and "lawn grass". Vegetation at "weed fields" should be examined to determine whether the weeds consist primarily of species native to the southwest or introduced species such as Kochia. Fields of native weeds and lawn grass are best evaluated using the short grass prairie habitat guides.

The applicable portions of Section III of the checklist should be completed for each individual habitat identified. For example, the questions in Section III.A of the checklist should be answered for each wetland area identified at or in the locality of the site and the individual areas must be identified on a map or maps.

Section IV- Exposure Pathway Evaluation is used to determine if contaminants at the site have the potential to impact habitat identified in Section III. An exposure pathway is the course a chemical or physical agent takes from a source to an exposed organism. Each exposure pathway includes a source (or release from a source), an environmental transport mechanism, an exposure point, and an exposure route. A complete exposure pathway is one in which each of these components, as well as a receptor to be exposed, is present. Essentially, this section addresses the fate and transport of contaminants that are known or suspected to have been released at the site. In most cases, without a complete exposure pathway between contaminants and receptors, additional ecological evaluation is not warranted.

Potential transport pathways addressed in this checklist include migration of contaminants via air dispersion, leaching into groundwater, soil erosion/runoff, groundwater discharge to surface water, and irradiation. Due to New Mexico's semi-arid climate, vegetation is generally sparse. The sparse vegetation, combined with the intense nature of summer storms in New Mexico, results in soil erosion that occurs sporadically over a very brief time frame. Soil erosion may be of particular concern for sites located in steeply sloped areas. Several questions within Section IV of this checklist have been developed to aid in the identification of those sites where soil erosion/runoff would be an important transport mechanism.

USING THE CHECKLIST TO DEVELOP THE PRELIMINARY CONCEPTUAL SITE EXPOSURE MODEL

The completed Site Assessment Checklist can be used to construct the PCSEM. An example PCSEM diagram is presented in Figure 1. The CSM illustrates actual and potential contaminant migration and exposure pathways to associated receptors. The components of a complete exposure pathway are simplified and grouped into three main categories: sources, release mechanisms, and potential receptors. As a contaminant migrates and/or is transformed in the environment, sources and release mechanisms may expand into primary, secondary, and tertiary levels. For example, Figure 1 illustrates releases from inactive lagoons (primary sources) through spills (primary release mechanism), which migrate to surface and subsurface soils (secondary sources), which are then leached (secondary release mechanism) to groundwater (tertiary source). Similarly, exposures of various trophic levels to the contaminant(s) and consequent exposures via the food chain may lead to multiple groups of receptors. For example, Figure 1 illustrates groups of both aquatic and terrestrial receptors which may be exposed and subsequently serve as tertiary release mechanisms to receptors which prey on them.

Although completing the checklist will not provide the user with a readymade PCSEM, a majority of the components of the PCSEM can be found in the answers to the checklist. It is

 then up to the user to put the pieces together into a comprehensive whole. The answers from Section II of the checklist, Site Characterization, can be used to identify sources of releases. The answers to Section IV, Exposure Pathway Evaluation, will assist users in tracing the migration pathways of releases in the environment, thus helping to identify release mechanisms and sources. The results of Section III, Habitat Evaluation, can be used to both identify secondary and tertiary sources and to identify the types of receptors which may be exposed. Appendix B of the NMED's *Guidance for Assessing Ecological Risks Posed by Chemicals: Screening-Level Ecological Assessment* also contains sample food webs which may be used to develop the PCSEM.

Once all of the components have been identified, one can begin tracing the steps between the primary releases and the potential receptors. For each potential receptor, the user should consider all possible exposure points (e.g., prey items, direct contact with contaminated soil or water, etc.) then begin eliminating pathways, which are not expected to result in exposure to the contaminant at the site. Gradually, the links between the releases and receptors can be filled in, resulting in potential complete exposure pathways.

For further guidance on constructing a PCSEM, consult the NMED's *Guidance for Assessing Ecological Risks Posed by Chemicals: Screening-Level Ecological Assessment* (2000), and EPA's Office of Solid Waste and Emergency *Response's Soil Screening Guidance: User's Guide* (1996).

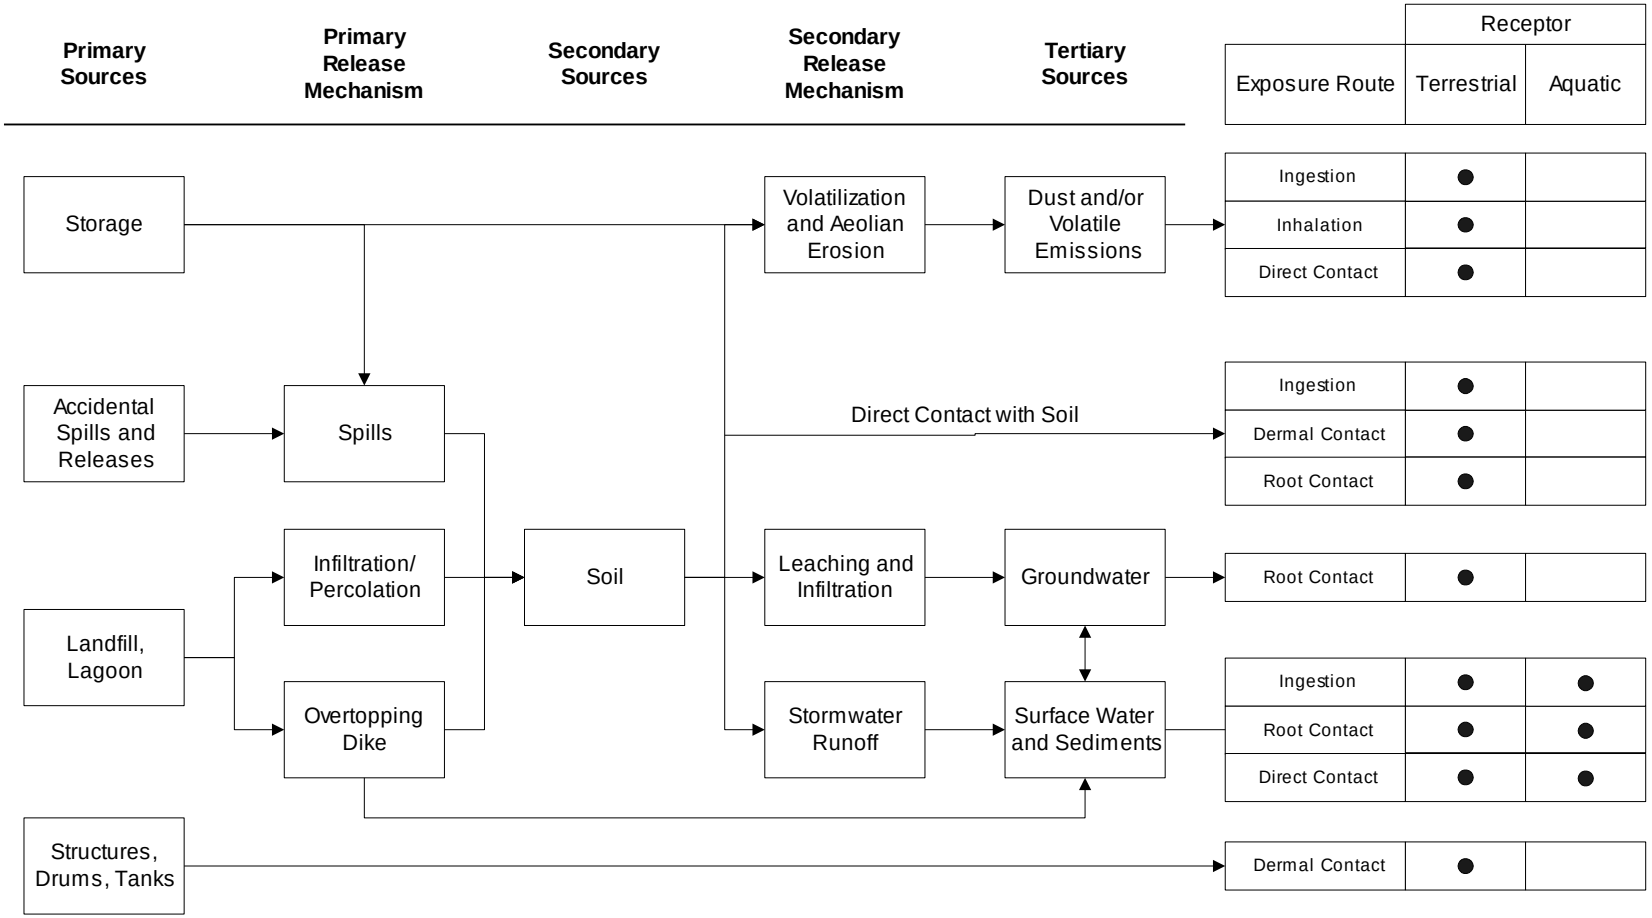

Figure 1. Example Preliminary Conceptual Site Exposure Model Diagram

NEW MEXICO ENVIRONMENT DEPARTMENT
SITE ASSESSMENT CHECKLIST

I. SITE LOCATION

1. Site Name: FWDA Parcel 3 - Inner Fence
   US EPA I.D. Number: NM6213820974
   Location: 8 miles east of Gallup on Highway 66
   County: McKinley
   City: _____ State: NM

2. Latitude: _____ Longitude: _____

3. Attach site maps, including a topographical map, a diagram which illustrates the layout of the facility (e.g., site boundaries, structures, etc.), and maps showing all habitat areas identified in Section III of the checklist. Also, include maps which illustrate known release areas, sampling locations, and any other important features, if available.

II. SITE CHARACTERIZATION

1. Indicate the approximate area of the site (i.e., acres or sq. ft)
   200 acres
2. Provide an approximate breakdown of the land uses on the site:

_____% Heavy Industrial	_____% Light Industrial	_____% Urban
_____% Residential	_____% Rural	_____% Agricultural[b]
_____% Recreational[a]	_____% Undisturbed	100 % Other[c]

[a]For recreational areas, please describe the usage of the area (e.g., park, playing field, etc.):
_____

[b]For agricultural areas, please list the crops and/or livestock which are present:
_____

[c]For areas designated as "other", please describe the usage of the area:
Currently not used, security fencing around area prevents access

3. Provide an approximate breakdown of the land uses in the area surrounding the site. Indicate the radius (in miles) of the area described: _____

_____% Heavy Industrial	_____% Light Industrial	_____% Urban
_____% Residential	_____% Rural	_____% Agricultural[b]
_____% Recreational[a]	_____% Undisturbed	100 % Other [c]

[a]For recreational areas, please describe the usage of the area (e.g., park, playing field, golf course, etc.):

_____

[b]For agricultural areas, please list the crops and/or livestock which are present:

_____

[c]For areas designated as "other", please describe the usage of the area:

Not used. site is surrounded by a former Army Depot
Building and roads in various stages of decay are present

4. Describe reasonable and likely future land and/or water use(s) at the site.

Site will not be used. The site is secure and will remain in the Army's possession.

5. Describe the historical uses of the site. Include information on chemical releases that may have occurred as a result of previous land uses. For each chemical release, provide information on the form of the chemical released (i.e., solid, liquid, vapor) and the known or suspected causes or mechanism of the release (i.e., spills, leaks, material disposal, dumping, explosion, etc.).

The site was a Army Depot and is contaminated with unexploded ordnance (UXO). Any releases would be the result of exposed explosive filler (e.g. TNT) to the environment from incompleted destruction.

6. If any movement of soil has taken place at the site, describe the degree of the disturbance. Indicate the likely source of any disturbances (e.g., erosion, agricultural, mining, industrial activities, removals, etc.) and estimate when these events occurred.

No significant movement of soil has occurred. Erosion may move soils during rain events, however, the site is in the high desert and doesn't receive significant rainfall.

7. Describe the current uses of the site. Include information on recent (previous 5 years) disturbances or chemical releases that have occurred. For each chemical release, provide information on the form of the chemical released and the causes or mechanism of the release.

The site is unused. There are no known or confirmed chemical releases. Any release would be from exposed explosive filler to the environment as a result of incomplete detonation of UXO.

8. Identify the location or suspected location of chemical releases at the site. Provide an estimate of the distance between these locations and the areas identified in Section III.

There are no know releases. Location(s) would be arbitrary from individual UXO where explosive filler was exposed to the environment.

9. Identify the suspected contaminants of concern (COCs) at the site. If known, include the maximum contaminant levels. Please indicate the source of data cited (e.g., RFI, confirmatory sampling, etc.).

Explosives such as RDX, HMX, and TNT and metals such as cadmium and chromium. Confirmatory sampling was completed at 200 locations within the site.

10. Identify the media (e.g., soil (surface or subsurface), surface water, air, groundwater) which are known or suspected to contain COCs.

Surface soil.

11. Indicate the approximate depth to groundwater (in feet below ground surface [(bgs)].

Greater than 50 feet.

12. Indicate the direction of groundwater flow (e.g., north, southeast, etc.)

Unknown.

III. HABITAT EVALUATION

III.A Wetland Habitats

Are any wetland[2] areas such as marshes or swamps on or adjacent to the site?

☐ Yes ☒ No

If yes, indicate the wetland area on the attached site map and answer the following questions regarding the wetland area. If more than one wetland area is present on or adjacent to the site, make additional copies of the following questions and fill out for each individual wetland area. Distinguish between wetland areas by using names or other designations (such as location), and clearly identify each area on the site map. Also, obtain and attach a National Wetlands Inventory Map (or maps) to illustrate each wetland area.

Identify the sources of the observations and information (e.g., National Wetland Inventory, Federal or State Agency, USGS topographic maps) used to make the determination that wetland areas are or are not present.
National Wetlands Inventory Wetlands Mapper, USGS Topographic Map
_____
_____
_____

If no wetland areas are present, proceed to Section III.B.

Wetland Area Questions

☐ Onsite ☐ Offsite

Name or
Designation:_____

1. Indicate the approximate area of the wetland (acres or ft^2)_____

2. Identify the type(s) of vegetation present in the wetland.

- ❑ Submergent (i.e., underwater) vegetation
- ❑ Emergent (i.e., rooted in the water, but rising above it) vegetation
- ❑ Floating vegetation
- ❑ Scrub/shrub
- ❑ Wooded

2Wetlands are defined in 40 CFR §232.2 as " Areas inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances does support, a prevalence of vegetation typically adapted for life in saturated soil conditions." Examples of typical wetlands plants include: cattails, cordgrass, willows and cypress trees. National wetland inventory maps may be available at http:\\nwi.fws.gov. Additional information on wetland delineation criteria is also available from the Army Corps of Engineers.

- ❑ Other (Please describe):_____

3. Estimate the vegetation density of the wetland area.

   - ❑ Dense (i.e., greater than 75% vegetation)
   - ❑ Moderate (i.e., 25% to 75% vegetation)
   - ❑ Sparse (i.e., less than 25% vegetation)

4. Is standing water present? ☐ Yes ☐ No

   If yes, is the water primarily: ☐ Fresh or ☐ Brackish
   Indicate the approximate area of the standing water (ft^2):
   _____
   Indicate the approximate depth of the standing water, if known (ft. or in.)_____

5. If known, indicate the source of the water in the wetland.

   - ❑ Stream/River/Creek/Lake/Pond
   - ❑ Flooding
   - ❑ Groundwater
   - ❑ Surface runoff

6. Is there a discharge from the facility to the wetland? ☐ Yes ☐ No
   If yes, please describe:_____
   _____
   _____
   _____
   _____
   _

Wetland Area Questions (Continued)

7. Is there a discharge from the wetland? ☐ Yes ☐ No
If yes, indicate the type of aquatic feature the wetland discharges into:

- ❑ Surface stream/River (Name:_____)
- ❑ Lake/Pond (Name:_____)
- ❑ Groundwater
- ❑ Not sure

8. Does the area show evidence of flooding? ☐ Yes ☐ No
If yes, indicate which of the following are present (mark all that apply):

- ❑ Standing water
- ❑ Water-saturated soils
- ❑ Water marks
- ❑ Buttressing
- ❑ Debris lines
- ❑ Mud cracks
- ❑ Other (Please describe):_____

9. Animals observed in the wetland area or suspected to be present based on indirect evidence or file material:

- ❑ Birds
- ❑ Fish
- ❑ Mammals
- ❑ Reptiles (e.g., snakes, turtles)
- ❑ Amphibians (e.g., frogs, salamanders)
- ❑ Sediment-dwelling invertebrates (e.g., mussels, crayfish, insect nymphs)

Specify species, if known:

_____
_____
_____
_____

III.B Aquatic Habitats
III.B.1 Non-Flowing Aquatic Features

Are any non-flowing aquatic features (such as ponds or lakes) located at or adjacent to the site?

☐ Yes ☒ No

If yes, indicate the aquatic feature on the attached site map and answer the following questions regarding the non-flowing aquatic features. If more than one non-flowing aquatic feature is present on or adjacent to the site, make additional copies of the following questions and fill out for each individual aquatic feature. Distinguish between aquatic features by using names or other designations, and clearly identify each area on the site map.

If no, proceed to Section III.B.2.

Non-Flowing Aquatic Feature Questions

☐ Onsite ☐ Offsite

Name or Designation:_____

1. Indicate the type of aquatic feature present:

   - ❑ Natural (e.g., pond or lake)
   - ❑ Man-made (e.g., impoundment, lagoon, canal, etc.)

2. Estimate the approximate size of the water body (in acres or sq. ft.)_____

3. If known, indicate the depth of the water body (in ft. or in.)._____

Non-Flowing Aquatic Feature Questions (Continued)

4. Indicate the general composition of the bottom substrate. Mark all sources that apply from the following list.

☐ Bedrock	☐ Sand	☐ Concrete
☐ Boulder (>10 in.)	☐ Silt	☐ Debris
☐ Cobble (2.5 - 10 in.)	☐ Clay	☐ Detritus
☐ Gravel (0.1 - 2.5 in.)	☐ Muck (fine/black)	

☐ Other (please specify):_____

5. Indicate the source(s) of the water in the aquatic feature. Mark all sources that apply from the following list.

- ❑ River/Stream/Creek
- ❑ Groundwater
- ❑ Industrial Discharge
- ❑ Surface Runoff
- ❑ Other (please specify):_____

6. Is there a discharge from the facility to the aquatic feature? ☐ Yes ☐ No

If yes, describe the origin of each discharge and its migration path:

_____
_____
_____
_____

7. Does the aquatic feature discharge to the surrounding environment? ☐ Yes ☐ No

If yes, indicate the features from the following list into which the aquatic feature discharges, and indicate whether the discharge occurs onsite or offsite:

- ❑ River/Stream/Creek ☐ onsite ☐ offsite
- ❑ Groundwater ☐ onsite ☐ offsite
- ❑ Wetland ☐ onsite ☐ offsite
- ❑ Impoundment ☐ onsite ☐ offsite
- ❑ Other (please describe)_____

Non-Flowing Aquatic Feature Questions (Continued)

8. Animals observed in the vicinity of the aquatic feature or suspected to be present based on indirect evidence or file material:

- ❑ Birds
- ❑ Fish
- ❑ Mammals
- ❑ Reptiles (e.g., snakes, turtles)
- ❑ Amphibians (e.g., frogs, salamanders)
- ❑ Sediment-dwelling invertebrates (e.g., mussels, crayfish, insect nymphs)

Specify species, if known:

_____
_____
_____
_____

III.B.2 Flowing Aquatic Features

Are any flowing aquatic features (such as streams or rivers) located at or adjacent to the site?

☒ Yes ☐ No

If yes, indicate the aquatic feature on the attached site map and answer the following questions regarding the flowing aquatic features. If more than one flowing aquatic feature is present on or adjacent to the site, make additional copies of the following questions and fill out for each individual aquatic feature. Distinguish between aquatic features by using names or other designations, and clearly identify each area on the site map

If no, proceed to Section III.C.

Flowing Aquatic Feature Questions

☒ Onsite ☒ Offsite

Name or Designation: Two unnamed arroyo exiting the site

1. Indicate the type of flowing aquatic feature present.

- ☐ River
- ☐ Stream
- ☐ Creek
- ☐ Brook
- ☐ Dry wash
- ☒ Arroyo
- ☐ Intermittent stream
- ☐ Artificially created (ditch, etc.)
- ☐ Other (specify)
- ☐

2. Indicate the general composition of the bottom substrate.

☐ Bedrock	☒ Sand	☐ Concrete
☐ Boulder (>10 in.)	☒ Silt	☐ Debris
☐ Cobble (2.5 - 10 in.)	☒ Clay	☐ Detritus
☐ Gravel (0.1 - 2.5 in.)	☐ Muck (fine/black)	

☐ Other (please specify): _____

3. Describe the condition of the bank (e.g., height, slope, extent of vegetative cover) of the aquatic feature.

Height varries from 5 to 15 feet. Slope varies from nearly vertical to 15 percent. Sslope is 75 percent covered with vegetation that includes desert grasses, shrubs and pinion/juniper trees.

4. Is there a discharge from the facility to the aquatic feature? ☐ Yes ☒ No

If yes, describe the origin of each discharge and its migration path:

Discharge is limited to runoff during summer rain events.

5. Indicate the discharge point of the water body. Specify name, if known.

Unknown.

Flowing Aquatic Feature Questions (Continued)

6. If the flowing aquatic feature is a dry wash or arroyo, answer the following questions.
   - ❑ Check here if feature is not a dry wash or arroyo

   If known, specify the average number of days in a year in which flowing water is present in the feature: 15

   Is standing water or mud present? Check all that apply.
   - ❑ Standing water
   - ❑ Mud
   - ☒ Neither standing water or mud

   Does the area show evidence of recent flow (e.g., flood debris clinging to vegetation)?
   - ❑ Yes
   - ☒ No
   - ❑ Not sure

7. Animals observed in the vicinity of the aquatic feature or suspected to be present based on indirect evidence or file material:

   - ❑ Birds
   - ❑ Fish
   - ☒ Mammals
   - ☒ Reptiles (e.g., snakes, turtles)
   - ❑ Amphibians (e.g., frogs, salamanders)
   - ❑ Sediment-dwelling invertebrates (e.g., mussels, crayfish, insect nymphs)

   Specify species, if known:
   Unknown, but species that have been seen in the area include, deer, elk, coyotes, rattlesnake

III.C Terrestrial Habitats
III.C.1 Wooded

Are any wooded areas on or adjacent to the site? ☒ Yes ☐ No

If yes, indicate the wooded area on the attached site map and answer the following questions. If more than one wooded area is present on or adjacent to the site, make additional copies of the following questions and fill out for each individual wooded area. Distinguish between wooded areas by using names or other designations, and clearly identify each area on the site map.

If no, proceed to Section III.C.2.

Wooded Area Questions

☒ On-site ☒ Off-site

Name or Designation: Unnamed area

1. Estimate the approximate size of the wooded area (in acres or sq. ft.) 180 acres

2. Indicate the dominant type of vegetation in the wooded area.

   - ☐ Evergreen
   - ☐ Deciduous
   - ☒ Mixed

   Dominant plant species, if known: Juniper and pinion

3. Estimate the vegetation density of the wooded area.

   - ☐ Dense (i.e., greater than 75% vegetation)
   - ☒ Moderate (i.e., 25% to 75% vegetation)
   - ☐ Sparse (i.e., less than 25% vegetation)

4. Indicate the predominant size of the trees at the site. Use diameter at chest height.

   - ☐ 0-6 inches
   - ☐ 6-12 inches
   - ☐ >12 inches
   - ☒ No single size range is predominant

5. Animals observed in the wooded area or suspected to be present based on indirect evidence or file material:

   - ☒ Birds
   - ☒ Mammals
   - ☒ Reptiles (e.g., snakes, lizards)
   - ☐ Amphibians (e.g., toads, salamanders)

   Specify species, if known:
   Deer, elk, coyotes, rattlesnakes and various bird species have been observed.

III.C.2 Shrub/Scrub

Are any shrub/scrub areas on or adjacent to the site? ☒ Yes ☐ No

If yes, indicate the shrub/scrub area on the attached site map and answer the following questions. If more than one shrub/scrub area is present on or adjacent to the site, make additional copies of the following questions and fill out for each individual shrub/scrub area. Distinguish between shrub/scrub areas, using names or other designations, and clearly identify each area on the site map.

If no, proceed to Section III.C.3.

Shrub/Scrub Area Questions

☒ Onsite ☒ Offsite

Name or Designation: Unnamed

1. Estimate the approximate size of the shrub/scrub area (in acres or sq. ft.). 180acres

2. Indicate the dominant type of shrub/scrub vegetation present, if known.
Sagebrush that is interspersed within the wooded areas.

3. Estimate the vegetation density of the shrub/scrub area.

- ☐ Dense (i.e., greater than 75% vegetation)
- ☒ Moderate (i.e., 25% to 75% vegetation)
- ☐ Sparse (i.e., less than 25% vegetation)

4. Indicate the approximate average height of the scrub/shrub vegetation.

- ☒ 0-2 feet
- ☐ 2-5 feet
- ☐ >5 feet

5. Animals observed in the shrub/scrub area or suspected to be present based on indirect evidence or file material:

- ☒ Birds
- ☒ Mammals
- ☒ Reptiles (e.g., snakes, lizards)
- ☐ Amphibians (e.g., toads, salamanders)

Specify species, if known:
Species observed at the site include deer, elk, various species of birds, rattlesnakes.

III.C.3 Grassland

Are any grassland areas on or adjacent to the site? ☐ Yes ☒ No

If yes, indicate the grassland area on the attached site map and answer the following questions. If more than one grassland area is present on or adjacent to the site, make additional copies of the following questions and fill out for each individual grassland area. Distinguish between grassland areas by using names or other designations, and clearly identify each area on the site map.

If no, proceed to Section III.C.4.

Grassland Area Questions

☐ Onsite ☐ Offsite

Name or Designation:_____

1. Estimate the approximate size of the grassland area (in acres or sq. ft.)._____

2. Indicate the dominant plant type, if known.
_____
_____
_____
_____

3. Estimate the vegetation density of the grassland area.

   - ❑ Dense (i.e., greater than 75% vegetation)
   - ❑ Moderate (i.e., 25% to 75% vegetation)
   - ❑ Sparse (i.e., less than 25% vegetation)

4. Indicate the approximate average height of the dominant plant type (in ft. or in.)_

5. Animals observed in the grassland area or suspected to be present based on indirect evidence or file material:

   ❑Birds
   ❑Mammals
   ❑Reptiles (e.g., snakes, lizards)
   ❑Amphibians (e.g., toads, salamanders)

   Specify species, if known:

III.C.4 Desert

Are any desert areas on or adjacent to the site? ☒ Yes ☐ No

If yes, indicate the desert area on the attached site map and answer the following questions. If more than one desert area is present on or adjacent to the site, make additional copies of the following questions and fill out for each individual desert area. Distinguish between desert areas by using names or other designations, and clearly identify each area on the site map.

If no, proceed to Section III.C.5.

Desert Area Questions

☒ Onsite ☒ Offsite

Name or Designation:_____

1. Estimate the approximate size of the desert area (in acres or sq. ft.). 180 acres

2. Describe the desert area (e.g., presence or absence of vegetation, vegetation types, presence/size of rocks, sand, etc.)
Entire site is located in the high desert and consist of a mixture of desert grasses, sagebrush, pinion, junipers and small cactus.

3. Animals observed in the desert area or suspected to be present based on indirect evidence or file material:

☒ Birds
☒ Mammals
☒ Reptiles (e.g., snakes, lizards)
☐ Amphibians (e.g., toads, salamanders)

Specify species, if known:
Same species as observed through the site.

III.C.5 Other

1. Are there any other terrestrial communities or habitats on or adjacent to the site which were not previously described?

☐ Yes ☐ No

If yes, indicate the "other" area(s) on the attached site map and describe the area(s) below. Distinguish between onsite and offsite areas. If no, proceed to Section III.D.

III.D Sensitive Environments and Receptors

1. Do any other potentially sensitive environmental areas[3] exist adjacent to or within 0.5 miles of the site? If yes, list these areas and provide the source(s) of information used to identify sensitive areas. *Do not answer "no" without confirmation from the U.S. Fish and Wildlife Service and appropriate State of New Mexico division.*

There are no known sensitive environmental areas. Sources include the USFWS Information for Planning and Consultantion (IPaC) tool, NMED Bison-M and USGS Topographical Maps.
However, potential habitat was identified for potentially sensitive, threatened or endangered species, including gray verio, Zuni fleabane and monarch butterfly (see report text).

3 Areas that provide unique and often protected habitat for wildlife species. These areas are typically used during critical life stages such as breeding, hatching, rearing of young and overwintering. Refer to **Table 1** at the end of this document for examples of sensitive environments.

2. Are any areas on or near (i.e., within 0.5 miles) the site which are owned or used by local tribes? If yes, describe. *Contact the Tribal Liaison in the Office of the Secretary (505)827-2855 to obtain this information.*

No. The Army will retain possession of the area.

4. Does the site serve or potentially serve as a habitat, foraging area, or refuge by rare, threatened, endangered, candidate and/or proposed species (plants or animals), or any otherwise protected species? If yes, identify species. *This information should be obtained from the U.S. Fish and Wildlife Service and appropriate State of New Mexico division.*

Please see response to III.D.1

5. Is the site potentially used as a breeding, roosting or feeding area by migratory bird species? If yes, identify which species.

Potential habitat may exist for the Gray Vireo, which is federally listed under the migratory bird treaty act.

6. Is the site used by any ecologically[4], recreationally, or commercially important species? If yes, explain.

No

4 Ecologically important species include populations of species which provide a critical (i.e., not replaceable) food resource for higher organisms and whose function as such would not be replaced by more tolerant species; or perform a critical ecological function (such as organic matter decomposition) and whose functions will not be replaced by other species. Ecologically important species include pest and opportunistic species that populate an area if they serve as a food source for other species, but do not include domesticated animals (e.g., pets and livestock) or plants/animals whose existence is maintained by continuous human interventions (e.g., fish hatcheries, agricultural crops, etc.,)

IV. EXPOSURE PATHWAY EVALUATION

1. Do existing data provide sufficient information on the nature, rate, and extent of contamination at the site?

   - [x] Yes
   - [ ] No
   - [ ] Uncertain

   Please provide an explanation for your answer:
   Incremental and discrete samples were collected from 200 grids (each approximately 1/4 acre in size)

2. Do existing data provide sufficient information on the nature, rate, and extent of contamination in offsite affected areas?

   - [x] Yes
   - [ ] No
   - [ ] Uncertain
   - [ ] No offsite contamination

   Please provide an explanation for your answer:
   Sampling has been completed in the former HWMU, which is where one of the arroyos is located.

3. Do existing data address potential migration pathways of contaminants at the site?

   - [ ] Yes
   - [ ] No
   - [x] Uncertain

   Please provide an explanation for your answer:

4. Do existing data address potential migration pathways of contaminants in offsite affected areas?

- ❑ Yes
- ❑ No
- ☒ Uncertain
- ❑ No offsite contamination

Please provide an explanation for your answer:

5. Are there visible indications of stressed habitats or receptors on or near (i.e., within 0.5 miles) the site that may be the result of a chemical release? If yes, explain. Attach photographs if available.

No.

6. Is the location of the contamination such that receptors might be reasonably expected to come into contact with it? For soil, this means contamination in the soil 0 to 5 feet below ground surface (bgs). If yes, explain.

If contamination is present then receptors may reasonably come into contact with the contamination.

7. Are receptors located in or using habitats where chemicals exist in air, soil, sediment or surface water? If yes, explain.

If contamination is present, then receptors are located in or using habitat that may contain contaminants in shallow soil.

8. Could chemicals reach receptors via groundwater? Can chemicals leach or dissolve to groundwater? Are chemicals mobile in groundwater? Does groundwater discharge into receptor habitats? If yes, explain.

No, groundwater is deep at the site and infiltration is unlikely due to lavk of precipitation (`11 inches/year).

9. Could chemicals reach receptors through runoff or erosion? Answer the following questions:

What is the approximate distance from the contaminated area to the nearest watercourse or arroyo?

- ❑ 0 feet (i.e., contamination has reached a watercourse or arroyo)
- ❑ 1-10 feet
- ❑ 11-20 feet
- ❑ 21-50 feet
- ❑ 51-100 feet
- ❑ 101-200 feet
- ❑ > 200 feet
- ❑ > 500 feet
- ☒ > 1000 feet

What is the slope of the ground in the contaminated area?

- ❑ 0-10%
- ☒ 10-30%
- ❑ > 30%

What is the approximate amount of ground and canopy vegetative cover in the contaminated area?

- ❑ < 25%
- ☒ 25-75%
- ❑ > 75%

Is there visible evidence of erosion (e.g., a rill or gully) in or near the contaminated area?

- ☒ Yes
- ❑ No
- ❑ Do not know

Do any structures, pavement, or natural drainage features direct run-on flow (i.e., surface flows originating upstream or uphill from the area of concern) into the contaminated area?

- ❑ Yes
- ☒ No
- ❑ Do not know

10. Could chemicals reach receptors through the dispersion of contaminants in air (e.g., volatilization, vapors, fugitive dust)? If yes, explain.

No.

11. Could chemicals reach receptors through migration of non-aqueous phase liquids (NAPLs)? Is a NAPL present at the site that might be migrating towards receptors or habitats? Could NAPL discharge contact receptors or their habitat?

No.

12. Could receptors be impacted by external irradiation at the site? Are gamma emitting radionuclides present at the site? Is the radionuclide contamination buried or at the surface?

No.

PHOTOGRAPHIC DOCUMENTATION

During the site visit(s), photographs should be taken to document the current conditions at the site and to support the information entered in the checklist. For example, photographs may be used to document the following:

- The nature, quality, and distribution of vegetation at the site
- Receptors or evidence of receptors
- Potentially important ecological features, such as ponds and drainage ditches
- Potential exposure pathways
- Any evidence of contamination or impact

The following space may be used to record photo subjects.

SUMMARY OF OBSERVATIONS AND SITE SETTING

Include information on significant source areas and migration pathways that are likely to constitute complete exposure pathways.

Checklist Completed by John Carson

Date 2/28/2024

TABLE 3
EXAMPLES OF SENSITIVE ENVIRONMENTS

National Parks and National Monuments

Designated or Administratively Proposed Federal Wilderness Areas

National Preserves

National or State Wildlife Refuges

National Lakeshore Recreational Areas

Federal land designated for protection of natural ecosystems

State land designated for wildlife or game management

State designated Natural Areas

Federal or state designated Scenic or Wild River

All areas that provide or could potentially provide critical habitat[1] for state and federally listed Threatened or Endangered Species, those species that are currently petitioned for listing, and species designated by other agencies as sensitive or species of concern

All areas that provide or could potentially provide habitat for state protected species as defined in the Wildlife Code, Chapter 17 of the New Mexico Statutes

All areas that provide or could potentially provide habitat for migratory birds as protected by the Migratory Bird Treaty Act (16 U.S.C. §§ 703-712)

All areas that provide or could potentially provide habitat for bald eagles and golden eagles as protected by the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d)

All areas that provide or could potentially provide habitat for song birds as protected by the State of New Mexico statute (New Mexico Statute, 1978, Chapter 17, Game and Fish, 17-2-13)

---

1 Critical habitats are defined by the Endangered Species Act (50 CFR §424.02(d)) as:

> 1) Specific areas within the geographical area currently occupied by a species, at the time it is listed in accordance with the Act, on which are found those physical or biological features (I) essential to the conservation of the species and (ii) that may require special management considerations or protection, and 2) Specific areas outside the geographical area occupied by a species at the time it is listed upon a determination by the Secretary [of Interior] that such areas are essential for the conservation of the species.

All areas that provide or could potentially provide habitat for hawks, vultures and owls as protected by the State of New Mexico statute (New Mexico Statute, 1978, Chapter 17, Game and Fish, 17-2-14)

All areas that provide or could potentially provide habitat for horned toads and Bullfrogs as protected by the State of New Mexico statute (New Mexico Statute, 1978, Chapter 17, Game and Fish, 17-2-15 and 16, resp.)

All perennial waters (e.g., rivers, lakes, playas, sloughs, ponds, etc.)

All ephemeral drainage (e.g., arroyos, puddles/pools, intermittent streams, etc.) that provide significant wildlife habitat or that could potentially transport contaminants off site to areas that provide wildlife habitat

All riparian habitats

All perennial and ephemeral wetlands (not limited to jurisdictional wetlands)

All areas that are potentially important breeding, staging, and overwintering habitats as well as other habitats important for the survival of animals during critical periods of their life cycle.

Appendix D.2 – Attachment 2
McKinley County Special Status Species

All Species
McKinley

Taxonomic Group	# Species	Taxonomic Group	# Species
Amphibians	9	Birds	231
Coleoptera; beetles	9	Crustaceans	1
Ephemeroptera; mayfiles	1	Fish	11
Lepidoptera; moths and butterflies	143	Mammals	60
Misc. Arachnids	2	Molluscs	11
Odonata; dragonflies	16	Orthoptera; grasshoppers & crickets	34
Reptiles	20	Spiders	1

TOTAL SPECIES: 549

Common Name	Scientific Name	NMGF	US FWS	Critical Habitat	SGCN	Photo
Yucca Giant-Skipper	Megathymus yuccae					No Photo
Old World Swallowtail	Papilio machaon					No Photo
Southwestern Orangetip	Anthocharis thoosa					No Photo
Dryope Hairstreak	Satyrium dryope putnami					No Photo
Western Azure	Celastrina echo					No Photo
Pallid Blue	Euphilotes pallescens					No Photo
Lupine Blue	Plebejus lupini					No Photo

Appendix D.2 – Attachment 3
IPaC Resource List

IPaC **U.S. Fish & Wildlife Service**

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

NOT FOR CONSULTATION

Location

McKinley County, New Mexico

Local office

New Mexico Ecological Services Field Office

(505) 346-2525
(505) 346-2542

2105 Osuna Road Ne
Albuquerque, NM 87113-1001

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

---

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information. IPaC only shows species that are regulated by USFWS (see FAQ).

NOT FOR CONSULTATION

2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Birds

NAME	STATUS
Mexican Spotted Owl *Strix occidentalis lucida* Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/8196	Threatened
Yellow-billed Cuckoo *Coccyzus americanus* There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/3911	Threatened

Fishes

NAME	STATUS
Zuni Bluehead Sucker *Catostomus discobolus yarrowi* Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/3536	Endangered

Insects

NAME	STATUS
Monarch Butterfly *Danaus plexippus* Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/9743	Candidate

Flowering Plants

NAME	STATUS

NOT FOR CONSULTATION

Zuni Fleabane Erigeron rhizomatus Threatened

Wherever found

No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/5700

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

There are no critical habitats at this location.

You are still required to determine if your project(s) may have effects on all above listed species.

Bald & Golden Eagles

Bald and golden eagles are protected under the Bald and Golden Eagle Protection Act[1] and the Migratory Bird Treaty Act[2].

Any person or organization who plans or conducts activities that may result in impacts to bald or golden eagles, or their habitats[3], should follow appropriate regulations and consider implementing appropriate conservation measures, as described in the links below. Specifically, please review the "Supplemental Information on Migratory Birds and Eagles".

Additional information can be found using the following links:

- Eagle Management https://www.fws.gov/program/eagle-management
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide conservation measures for birds https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf
- Supplemental Information for Migratory Birds and Eagles in IPaC https://www.fws.gov/media/supplemental-information-migratory-birds-and-bald-and-golden-eagles-may-occur-project-action

There are bald and/or golden eagles in your project area.

NOT FOR CONSULTATION

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, see the PROBABILITY OF PRESENCE SUMMARY below to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
Golden Eagle Aquila chrysaetos This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1680	Breeds Dec 1 to Aug 31

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read "Supplemental Information on Migratory Birds and Eagles", specifically the FAQ section titled "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.

NOT FOR CONSULTATION

3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

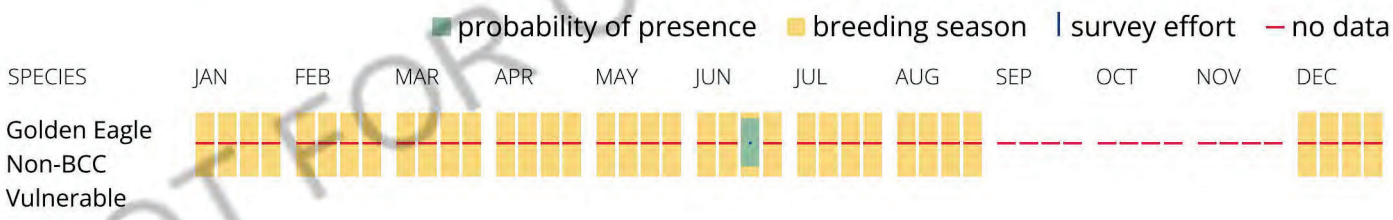
Breeding Season (▪)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.



NOT FOR CONSULTATION

What does IPaC use to generate the potential presence of bald and golden eagles in my specified location?

The potential for eagle presence is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply). To see a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What does IPaC use to generate the probability of presence graphs of bald and golden eagles in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur. Please contact your local Fish and Wildlife Service Field Office if you have questions.

NOT FOR CONSULTATION

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats[3] should follow appropriate regulations and consider implementing appropriate conservation measures, as described in the links below. Specifically, please review the "Supplemental Information on Migratory Birds and Eagles".

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Eagle Management https://www.fws.gov/program/eagle-management
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide conservation measures for birds https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf
- Supplemental Information for Migratory Birds and Eagles in IPaC https://www.fws.gov/media/supplemental-information-migratory-birds-and-bald-and-golden-eagles-may-occur-project-action

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this

location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, see the PROBABILITY OF PRESENCE SUMMARY below to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
Golden Eagle Aquila chrysaetos This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1680	Breeds Dec 1 to Aug 31

NOT FOR CONSULTATION

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read "Supplemental Information on Migratory Birds and Eagles", specifically the FAQ section titled "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted

Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.

2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (▪)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

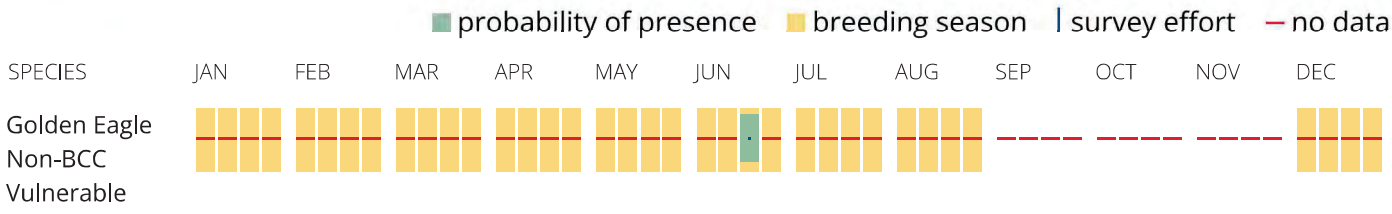
To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

NOT FOR CONSULTATION



Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure.

To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets.

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may query your location using the RAIL Tool and look at the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in

NOT FOR CONSULTATION

offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

NOT FOR CONSULTATION

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

There are no refuge lands at this location.

Fish hatcheries

There are no fish hatcheries at this location.

Wetlands in the National Wetlands Inventory (NWI)

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

NOT FOR CONSULTATION

Wetland information is not available at this time

This can happen when the National Wetlands Inventory (NWI) map service is unavailable, or for very large projects that intersect many wetland areas. Try again, or visit the NWI map to view wetlands at this location.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

df by Welch-Satterthwaite approximation:	**2.0**

Recommended UCL: **0.113** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Arsenic
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: Area

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: 50

df by Welch-Satterthwaite approximation:	5.5

Recommended UCL: **1.30** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Barium
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: Area

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: 50

df by Welch-Satterthwaite approximation: **4.5**

Recommended UCL: **252** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Beryllium
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: Area

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: 50

df by Welch-Satterthwaite approximation:	**4.1**

Recommended UCL: **0.673** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	9/17/2025
Calculator completed by:	CMC
Analyte:	Cadmium
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: **Area**

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: **50**

df by Welch-Satterthwaite approximation:	**4.3**

Recommended UCL: **0.422** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Chromium
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: Area

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: 50

df by Welch-Satterthwaite approximation:	**4.6**

Recommended UCL: **12.2** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Cobalt
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: Area

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: 50

df by Welch-Satterthwaite approximation:	**3.7**

Recommended UCL: **4.84** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Copper
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: Area

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: 50

df by Welch-Satterthwaite approximation:	5.8

Recommended UCL: **69.4** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Lead
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: Area

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: 50

df by Welch-Satterthwaite approximation:	**4.9**

Recommended UCL: **11.3** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Manganese
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: Area

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: 50

df by Welch-Satterthwaite approximation:	**4.4**

Recommended UCL: **393.8** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Mercury
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: **Area**

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: **50**

df by Welch-Satterthwaite approximation:	**2.2**	**Recommended UCL:**	**0.0394** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Nickel
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: Area

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: 50

df by Welch-Satterthwaite approximation:	**4.0**

Recommended UCL: **9.85** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Selenium
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: Area

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: 50

df by Welch-Satterthwaite approximation:	**4.1**

Recommended UCL: **1.19** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Thallium
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: Area

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: 50

df by Welch-Satterthwaite approximation:	3.8

Recommended UCL: **0.07** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Vanadium
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: Area

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: 50

df by Welch-Satterthwaite approximation:	**4.8**

Recommended UCL: **16.1** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean

Calculation of Weighted 95% UCLs for a Combined Decision Unit (DU) from Several Smaller DUs Having Replicate Incremental Samples

Enter information in green highlighted cells. See the "Instructions" tab for detailed instructions.

Project ID:	Fort Wingate Inner Fence
Property/Sample ID:	Inner Fence Area Grids
Date of calculations:	7/6/2024
Calculator completed by:	CMC
Analyte:	Zinc
Analyte units:	mg/kg
DU metric units:	Sq feet
Notes:	

Click in green cell below to select from drop-down menu

DU size metric: area, volume, or depth interval: Area

Note: Assumes all replicates have the same number of increments

Number of increments per replicate: 50

df by Welch-Satterthwaite approximation:	3.8

Recommended UCL: **29.4** **mg/kg** >> Student's t 95% UCL

Note: Student's-t or Chebychev 95% UCL may be appropriate.

*Student's t UCL is acceptable if adj'd CV for DU is "Low" (e.g., CV ≤ 1.5). The User should consult the instructions for additional guidance on which 95% UCL is recommended for specific data sets.

Notes

adj'd	= adjusted	df	= degrees of freedom	SD	= arithmetic standard deviation
calc'd	= calculated	DU	= decision unit	SE	= standard error
CV	= coefficient of variation	RSD	= relative standard deviation	95% UCL	= 95% upper confidence limit for arithmetic mean
