Notes:

[1] NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent	NA = not applicable
CAS = Chemical Abstracts Service	NS = No Standard
IEUBK = Integrated Exposure Uptake Biokinetic Model	RAG = Risk Assessment Guidance
HI = Hazard Index	SSL = soil screening level
J = Estimated	U = Nondetect
mg/kg = milligrams per kilogram	UTL = upper tolerance limit
N = no	Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. " The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[2] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Industrial Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

N = no

NA = not applicable

NS = No Standard

RAG = Risk Assessment Guidance

SSL = soil screening level

U = Nondetect

UTL = upper tolerance limit

Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UJ = Estimated nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Industrial Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Industrial Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Industrial Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Industrial Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Industrial Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

NA = not applicable
NS = No Standard
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Industrial Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Industrial Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Industrial Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

System	Hazard Quotient
Nervous	1.5
Endocrine	0.14
All Others	0.28

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent	NS = No Standard
CAS = Chemical Abstracts Service	RAG = Risk Assessment Guidance
HI = Hazard Index	SSL = soil screening level
J = Estimated	R = Rejected
mg/kg = milligrams per kilogram	U = Nondetect
N = no	UTL = upper tolerance limit
NA = not applicable	Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

System	Hazard Quotient
Nervous	1.4
Endocrine	0.13

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

System	Hazard Quotient
Nervous	1.1
Endocrine	0.13
All Others	0.25

NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent	NS = No Standard
CAS = Chemical Abstracts Service	RAG = Risk Assessment Guidance
HI = Hazard Index	SSL = soil screening level
J = Estimated	U = Nondetect
mg/kg = milligrams per kilogram	UJ = Estimated Nondetect
N = no	UTL = upper tolerance limit
NA = not applicable	Y = yes
N = no	UTL = upper tolerance limit
NA = not applicable	Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
R = Rejected
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent	NS = No Standard
CAS = Chemical Abstracts Service	RAG = Risk Assessment Guidance
HI = Hazard Index	SSL = soil screening level
J = Estimated	U = Nondetect
mg/kg = milligrams per kilogram	UJ = Estimated Nondetect
N = no	UTL = upper tolerance limit
NA = not applicable	Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

UTL = upper tolerance limit
Y = yes
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

System	Hazard Quotient
Nervous	1.7
Endocrine	0.16

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

System	Hazard Quotient
Nervous	0.9
Endocrine	0.11

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

									Exceeds Target Level		**N**	**Y**	

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent	NS = No Standard
CAS = Chemical Abstracts Service	RAG = Risk Assessment Guidance
HI = Hazard Index	SSL = soil screening level
J = Estimated	U = Nondetect
mg/kg = milligrams per kilogram	UJ = Estimated Nondetect
N = no	UTL = upper tolerance limit
NA = not applicable	Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

System	Hazard Quotient
Nervous	1.5
Endocrine	0.14
Kidneys	0.10
All Others	0.26

Notes:

[1]NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent	NS = No Standard
CAS = Chemical Abstracts Service	RAG = Risk Assessment Guidance
HI = Hazard Index	SSL = soil screening level
J = Estimated	U = Nondetect
mg/kg = milligrams per kilogram	UJ = Estimated Nondetect
N = no	UTL = upper tolerance limit
NA = not applicable	Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

System	Hazard Quotient
Nervous	1.0
Endocrine	0.13
All Others	0.27

Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent	NS = No Standard
CAS = Chemical Abstracts Service	RAG = Risk Assessment Guidance
HI = Hazard Index	SSL = soil screening level
J = Estimated	U = Nondetect
mg/kg = milligrams per kilogram	UTL = upper tolerance limit
N = no	Y = yes
NA = not applicable	

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

System	Hazard Quotient

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. " The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

									Exceeds Target Level		**N**	**Y**	

Notes:

[1] NMED = New Mexico Environment Department Construction Worker Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

[2] NMEDC = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

[3] Chromium screening value is for Total Chromium.

% = percent	NS = No Standard
CAS = Chemical Abstracts Service	RAG = Risk Assessment Guidance
HI = Hazard Index	SSL = soil screening level
J = Estimated	UJ = Estimated Nondetect
mg/kg = milligrams per kilogram	UTL = upper tolerance limit
N = no	Y = yes
NA = not applicable	

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

System	Hazard Quotient

Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

System	Hazard Quotient

Notes:

[1] NMED = New Mexico Environment Department Residential Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Residential Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
IEUBK = Integrated Exposure Uptake Biokinetic Model
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Resdential Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Residential Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
IEUBK = Integrated Exposure Uptake Biokinetic Model
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Residential Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Residential Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
IEUBK = Integrated Exposure Uptake Biokinetic Model
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

Notes:

[1] NMED = New Mexico Environment Department Residential Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = United States Environmental Protection Agency (USEPA) Residential Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1.

[2] Chromium screening value is for Total Chromium.

% = percent
CAS = Chemical Abstracts Service
HI = Hazard Index
IEUBK = Integrated Exposure Uptake Biokinetic Model
J = Estimated
mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UJ = Estimated Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

mg/kg = milligrams per kilogram
N = no
NA = not applicable
NS = No Standard
RAG = Risk Assessment Guidance
SSL = soil screening level
U = Nondetect
UTL = upper tolerance limit
Y = yes

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments." The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

										Cumulative Risk/Hazard		**3E-06**	**0.95**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
DL = Detection limit
J = Estimated
LOD = Limit of detection
LOQ = Limit of Quantitation
mg/kg = milligrams per kilogram
NS = No Standard
TEF = Toxicity Equivalency Factor
TEQ = Toxicity Equivalency Quotient
U = Nondetect
UJ = Estimated Nondetect
UTL = Upper tolerance limit

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
DL = Detection limit
J = Estimated
LOD = Limit of detection
LOQ = Limit of Quantitation
mg/kg = milligrams per kilogram
NS = No Standard
TEF = Toxicity Equivalency Factor
TEQ = Toxicity Equivalency Quotient
U = Nondetect
UJ = Estimated Nondetect
UTL = Upper tolerance limit

										Cumulative Risk/Hazard		**4E-07**	**1.7**	
										Exceeds Target Level		**N**	**Y**	

System	Hazard Quotient
Nervous	1.2
Endocrine	0.14
GI	0.10
Blood	0.10
All Others	0.20

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
DL = Detection limit
J = Estimated
LOD = Limit of detection
LOQ = Limit of Quantitation
mg/kg = milligrams per kilogram
NS = No Standard
TEF = Toxicity Equivalency Factor
TEQ = Toxicity Equivalency Quotient
U = Nondetect
UJ = Estimated Nondetect
UTL = Upper tolerance limit

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
DL = Detection limit
J = Estimated
LOD = Limit of detection
LOQ = Limit of Quantitation
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect

										Cumulative Risk/Hazard		**5E-07**	**0.05**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
DL = Detection limit
J = Estimated
LOD = Limit of detection
LOQ = Limit of Quantitation
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect
UTL = Upper tolerance limit

System	Hazard Quotient
Nervous	1.1
Endocrine	0.11
All Others	0.25

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
DL = Detection limit
J = Estimated
LOD = Limit of detection
LOQ = Limit of Quantitation
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect
UTL = Upper tolerance limit

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
DL = Detection limit
J = Estimated
LOD = Limit of detection
LOQ = Limit of Quantitation
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect
UTL = Upper tolerance limit

Cyanide	57-12-5	mg/kg	0.32	U			NS	NS	63	N	NMED		
Nitrate	14797-55-8	mg/kg	4.3	J			NS	NS	2,080,000	N	NMED		2.07E-06
Perchlorate	14797-73-0	mg/kg	0.002	UJ			NS	NS	908	N	NMED		
										Cumulative Risk/Hazard		**7E-07**	**0.07**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
DL = Detection limit
J = Estimated
LOD = Limit of detection
LOQ = Limit of Quantitation
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect
UTL = Upper tolerance limit

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
DL = Detection limit
J = Estimated
LOD = Limit of detection
LOQ = Limit of Quantitation
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect
UTL = Upper tolerance limit

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

2) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
TEF = toxicity equivalency factor
TEQ = toxicity equivalency quotient
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

IEUBK = Integrated Exposure Uptake Biokentic Model

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

TEF = toxicity equivalency factor

TEQ = toxicity equivalency quotient

U = Nondetect

UJ = Estimated Nondetect

										Cumulative Risk/Hazard		**5E-07**	**2.39**	
										Exceeds Target Level		**N**	**Y**	

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

System	Hazard Quotient
Nervous	1.9
Endocrine	0.14
GI	0.11
Blood	0.11
All Others	0.25

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
TEF = toxicity equivalency factor
TEQ = toxicity equivalency quotient
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

TEF = Toxicity equivalency factor

TEQ = toxicity equivalency quotient

U = Nondetect

UJ = Estimated Nondetect

										Cumulative Risk/Hazard		**5E-07**	**0.06**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

2) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022,

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

IEUBK = Integrated Exposure Uptake Biokentic Model

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

TEF = Toxicity equivalency factor

TEQ = toxicity equivalency quotient

U = Nondetect

UJ = Estimated Nondetect

Cyanide	57-12-5	mg/kg	0.31	U			NS	NS	12	N	NMED			
Nitrate	14797-55-8	mg/kg	2.6	J			NS	NS	566,000	N	NMED		4.59E-06	
Perchlorate	14797-73-0	mg/kg	0.002	U			NS	NS	248	N	NMED			
										Cumulative Risk/Hazard		**4E-07**	**2.4**	
										Exceeds Target Level		**N**	Y	

System	Hazard Quotient
Nervous	1.9
Endocrine	0.13
All Others	0.32

Notes:

[S] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den Berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update)

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
TEF = Toxicity equivalency factor
TEQ = toxicity equivalency quotient
U = Nondetect
UJ = Estimated Nondetect

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
TEF = Toxicity equivalency factor
TEQ = Toxicity equivalency quotient
U = Nondetect
UJ = Estimated Nondetect

										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service

IEUBK = Integrated Exposure Uptake Biokentic Model

J = Estimated

mg/kg = milligrams per kilogram

NS = No Standard

TEF = Toxicity equivalency factor

TEQ = Toxicity equivalency quotient

U = Nondetect

UJ = Estimated Nondetect

All Others	0.20

Notes:

[s] = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update).

2) NMED[C] = For chemicals with no current NMED SSL, the SSL was calculated using NMED methodology. See **Appendix D**.

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
J = Estimated
mg/kg = milligrams per kilogram
NS = No Standard
TEF = Toxicity equivalency factor
TEQ = Toxicity equivalency quotient
U = Nondetect
UJ = Estimated Nondetect

										Cumulative Risk/Hazard		**3E-06**	**0.9**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

1) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

2) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

3) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
DL = Detection limit
J = Estimated
LOD = Limit of detection
LOQ = Limit of Quantitation
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect
UTL = Upper tolerance limit

TABLE D1-AF25-2
CALCULATION OF INDUSTRIAL WORKER RISKS FOR HIGH DENSITY BUFFER AREA GRID AF25
FORT WINGATE DEPOT ACTIVITY INNER FENCE
MCKINLEY COUNTY, NEW MEXICO

	CAS Number	Units	Final Result		Raw Data Result	TEF	Industrial Value Cancer Endpoint	Exceeds Residential SSL (cancer) (Y/N)	Industrial Value Noncancer Endpoint	Exceeds Residential SSL (noncancer) (Y/N)	Source (2)	Estimated Cancer Risk	Estimated Hazard Quotient
OTHER PARAMETERS (mg/kg)													
Cyanide	57-12-5	mg/kg	0.33	U			NS	NS	63	N	NMED		
Nitrate	14797-55-8	mg/kg	4.5	J			NS	NS	2,080,000	N	NMED		2.16E-06
Perchlorate	14797-73-0	mg/kg	0.0017	UJ			NS	NS	908	N	NMED		
										Cumulative Risk/Hazard		**6E-07**	**0.06**
										Exceeds Target Level		**N**	**N**

Notes:

s = 1,3-Dichloropropene was used as a surrogate for 1,1-dichloropropene and cis- and trans-1,3-dichloropropene. 1,4-Dichlorobenzene was used as a surrogate for 1,3-dichlorobenzene. 1,2-Dichloropropane was used as a surrogate for 2,2-dichloropropane. For m,p-xylenes the lower value between m-xylene and p-xylene was used for the sum of the isomers. Cumene was used as a surrogate for p-isopropyltoluene. 4-Nitroaniline was used as a surrogate for 3-nitroaniline. Pyrene was used as a surrogate for acenaphthylene and benzo(g,h,i)perylene.

2) NMED = New Mexico Environment Department Screening Levels (NMED 2022, November update). Cancer Risk = 1E-05, Hazard Quotient 1; RSL = Regional Screening Levels (USEPA 2023, November Update). Cancer Risk Adjusted to = 1E-05, Hazard Quotient = 1

3) Toxicity data for the dioxin and furan congeners were assessed using the 2005 World Health Organization's (WHO) toxicity equivalency factors (TEF) (Van den berg, et al 2006). TEFs were applied to the analytical results and summed for each sample resulting in a toxicity equivalent (TEQ). The TEQ was then compared to the NMED cancer and non-cancer SSLs for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). (NMED 2022, November update).

4) Chromium screening value is for Total Chromium.

Dibenz(a,h)anthracene has an SSL above the DL and LOD but below the LOQ. However, this compound is not known to have been used at FWDA. Dibenzo(a,h)anthracene is a polycyclic aromatic hydrocarbon (PAH) with no commercial production or known use. It occurs as a component of coal tars, shale oils, and soots and has been detected in gasoline engine exhaust, coke oven emissions, cigarette smoke, charcoal broiled meats, vegetation near heavily travelled roads, and combustion sources. (If there was a detection between the DL and LOQ the lab would J qualify the result the substance might be there but at a higher degree of uncertainty. Results were U qualified to the LOD as non-detect per the DoD QSM.)

N-Nitrosodimethylamine has an SSL below the DL, LOD, and LOQ. However, this analyte is not suspected to have been used at Fort Wingate. N-nitrosodimethylamine was produced by industry only in small amounts for research.

According to Section 5.3 of the NMED RAG, November 2022 update, essential nutrients (calcium, chloride, magnesium, phosphorus, potassium, sodium) should be evaluated separately. "If the maximum detected concentration for the site is below the soil SSL, resulting in an HQ of less than one, then exposure is not likely to cause adverse effects to receptors, and the inorganic constituent may be eliminated from further evaluation in the risk assessments. The risks from essential nutrients may be discussed separately from the overall HI for noncarcinogens.

CAS = Chemical Abstracts Service
DL = Detection limit
J = Estimated
LOD = Limit of detection
LOQ = Limit of Quantitation
mg/kg = milligrams per kilogram
NS = No Standard
U = Nondetect
UJ = Estimated Nondetect
UTL = Upper tolerance limit
